/*
The following CSS variables define the main, public API for styling
JupyterLab.
These variables should be used by all plugins wherever possible. In
other
words, plugins should not define custom colors, sizes, etc unless
absolutely
necessary. This enables users to change the visual theme of JupyterLab
by changing these variables.

Many variables appear in an ordered sequence (0,1,2,3). These
sequences
are designed to work well together, so for example, `--jp-border-
color1` should
be used with `--jp-layout-color1`. The numbers have the following
meanings:

* 0: super-primary, reserved for special emphasis
* 1: primary, most important under normal situations
* 2: secondary, next most important under normal situations
* 3: tertiary, next most important under normal situations

Throughout JupyterLab, we are mostly following principles from
Google's
Material Design when selecting colors. We are not, however, following
all of MD as it is not optimized for dense, information rich UIs.
*/
